

Abel Orban

Date of birth: 18/06/1999 | **Nationality:** Romanian | **Gender:** Male | **Phone number:** (+40) 737919124 (Mobile) |
Email address: orban@abel.ro | **Address:** Str. Traian nr. 54A, 500332, Braşov, Romania (Home)

● WORK EXPERIENCE

10/06/2016 – 10/09/2016 Braşov, Romania
MATERIALS HANDLER CONREP SRL

15/06/2017 – 10/09/2017 Braşov, Romania
JUNIOR SOFTWARE DEVELOPER FUELPLUS

Assisted in the transition of the company's product to Angular2:

- created Angular2 components based on mockups
- created vanilla web components based on mockups (HTML5, CSS3, Vanilla JS)
- Other notable technologies used: SCSS, Bootstrap V4

01/06/2021 – 30/11/2021 Braşov, Romania
APPLICATION DEVELOPER ATOS

Assisted in the transition from a SUSE 11 (Enterprise) system to SUSE 15:

- familiarised myself with the Linux CLI
- used some Bash scripting, Git, Jira, Confluence
- bug fixes in separate sections of the company's product, so multiple technologies have been used (C++
+, SQLite, install scripts...)

17/01/2022 – 17/02/2022 Cluj-Napoca, Romania
DATA STEWARD VEEVA SYSTEMS

Keeping company data up-to-date:

- researching contact and job information about medical professionals via phone calls and online search
- introducing and verifying said information on the company's internal platform

01/07/2022 – CURRENT Braşov, Romania
SURVEY PROGRAMMER DYNATA

- Creation of surveys on the Decipher platform
- Customisation of existing survey elements (extending functionality of existing elements, combining elements, custom styling, etc.)
- Teamwork (team-based and project-based)
- Main Technologies: XML, Python, JavaScript, CSS3, HTML5, Microsoft Excel

● ADDITIONAL INFORMATION

PROJECTS

CURRENT

sl-gzdoom-wad-picker An alternate launcher for the GZDoom program made in Java. I'm highlighting it due to its potential usefulness to others in the future. I would greatly appreciate your feedback if you use GZDoom and / or work primarily with Java.

Link <https://github.com/slendersnax/sl-gzdoom-wad-picker>

slr-local-db A way to use the LocalStorage API more like a traditional database (for a given value of traditional).

It is basically a wrapper around the API calls in order to enable the creation of tables and insertion of data into said tables.

Made for personal use, not recommended (but curious how it would work) for serious uses as-is.

Link <https://github.com/slendersnax/slr-local-db>

CURRENT

Other - misc These projects are made for personal use or out of curiosity.

There are some technologies here that I haven't had the opportunity to use in a professional environment (yet). As opposed to **slr-local-db** these don't have any potential real-world uses, but that's not what they were made for anyway.
